Bilar och bränsleförbrukning

I den här publikationen presenteras en förteckning av samtliga personbilsmodeller för 2024 och de modeller som fanns tillgängliga för 2025 när informationen hämtades in i april 2025. I förteckningen finns information om respektive bils bränsleförbrukning och koldioxidutsläpp.

Vi presenterar även tio-i-topp-listor för de mest bränsleeffektiva bilarna. Topplistorna sorteras efter bränsletyperna bensin, diesel, elhybrid, laddhybrid, fordonsgas, el och vätgas. Varje bränsletyp sorteras enligt antal gram koldioxidutsläpp per km som uppstår när bilen körs enligt den standardiserade testmetoden WLTP. För rena elbilar sorteras topplistan på angiven förbrukning i kilowattimmar per 100 km enligt samma testmetod. För vätgas sorteras topplistan på angiven förbrukning i kilogram per 100 km.

Publikationen är framtagen enligt EU-direktiv 1999/94/EG som säger att bilhandlare ska tillhandahålla en årlig förteckning över alla nya personbilsmodeller som kan köpas i landet av konsumenter. Förteckningen ska innehålla information om bilarnas bränsleförbrukning och koldioxidutsläpp. Konsumentverket är ansvarig myndighet för att ta fram och tillhandahålla förteckningen till branschen och för att tillhandahålla konsumentinformation om bilars påverkan på miljön till konsumenter.

Det finns många olika typer av drivmedel som påverkar klimatet olika mycket. Riktig användning, regelbundet underhåll samt körsätt kan minska personbilens bränsleförbrukning och koldioxidutsläpp. På Konsumentverkets webbplats, konsumentverket.se, finns mer information om drivmedel och information om hur bilförare kan ta hand om och framföra sin bil för att minska bränsleförbrukningen och bilens påverkan på klimatet. Där finns även information om rättigheter och skyldigheter vid bilköp.

Förteckningen och tio-i-topp-listorna bygger på data hämtade från Bilvision.
